ACHILLEAS BOTSIDIS

Entry-Level Backend Developer | C# / .NET & Java

Thessaloniki, Greece | axilleasgrachilles@gmail.com
github.com/Th3Duckman | linkedin.com/in/achilleas-botsidis-85091539a

SUMMARY

Entry-level developer focused on backend development, with a working C#/.NET console application and IT support internship experience at dbsoft. Built Guardian on Fedora Linux with input validation, desktop notifications, and text-file persistence. Building a foundation in C#/.NET and Java for a trainee or junior software role.

TECHNICAL SKILLS

C# / .NET: Console applications, arrays, loops, input validation with TryParse, file I/O, System.Diagnostics.Process.

Java: Introductory programming experience, including a basic KB-to-MB converter.

Tools and systems: Visual Studio Code, Fedora Linux, Windows.

Additional exposure: HTML/CSS, Python.

PROJECTS

Guardian - Break-reminder console application | C# / .NET / Linux

- Accepts a user-defined interval and launches desktop notifications to prompt breaks.
- Validates intervals using int.TryParse and positive-value checks before starting a session.
- Loads and saves completed-round counts across runs, with an optional reset.
- Integrates system notifications using System.Diagnostics.Process and varied reminder messages.
